

# General instructions for project presentations

Your project presentation will be in total of 10 minutes with a potential one question from audience and should be organized in the following three sections (although you are free to pick any other design and flow for your presentation):

## **Motivation and significance**

What is the motivation of the problem you solved in the project and its significance in terms of solving problems related to smart cities and how government or private sectors will benefit from this analysis. Please perform a research on this and be creative and innovative.

## **Methods**

Briefly describe the methods used to perform analysis in your project.

## **Conclusions and findings**

Summarize your conclusions and findings in your project. Be creative in using metrics, tables, and figures to present your results.

## **Presentation format**

We encourage you to use powerpoint for presentation, but you are free to join any other platform to present your work. Please send me (miladm@berkeley.edu), your final presentation file by Sunday night of the day that you are presenting. For example if you are presenting on Dec 4th, send me your file by Sunday night, Dec 3rd.

The list of presenters and the detailed schedule is in the the main folder of projects as *Schedule.pdf*. The grading would be on any of the sections above plus (group grade) and the presentation skill which would be individual grade.
